

Polycom HDX 9000 Series

Offering a new level of video solution for customers who demand the very best in quality, flexibility, and usability.

The Polycom HDX 9000 Series was created by integrators, for integrators, offering the industry's highest level of flexibility and performance. Easily integrate a Polycom HDX 9000 product into a university auditorium with multiple cameras, projectors and displays. Create a unique and compelling C-level boardroom, complete with touch-panel displays, recessed lighting and individual monitors for each participant. Or build a state-of-the-art training facility with the ability to record each high definition video training, and HD document cameras to show local artifacts and documents. All of these meeting solutions – and more – are possible through integration using the Polycom HDX 9000 series and its powerful set of APIs coupled with an abundance of video and audio connectors.

Share your PC, document camera with Polycom's People+Content™ and unify your team with the internal MPP*Plus* 4-way MCU. This exceptional user experience applies to sound, as well. Polycom's patent-pending Siren™ 22 heightens users' senses to new levels. HDX also incorporates Polycom's patented StereoSurround™ technology, bringing new life to each call.

For a truly in-person meeting experience, video participants can hear remote participants' voices in stereo through left and right speakers. Yet, all this is accomplished with a single HDX microphone array, powerful enough to pick up even a soft voice at the far end of the room and transmit it to everyone on the video call.

Below are the three Polycom HDX 9000 series models and key features:

HDX 9001

- Extreme performance with 4 professional video inputs and 3 display outputs
- Standard Definition (720 x 480) video resolution
- Easy to integrate into any room with its 2U design and professional connectors.

HDX 9002

HD

- HD (1280 x720) video resolution at 1 Mbps and above at 30 frames per second
- Better video resolution at all call speeds
- Custom integration into any environment for a wide-range of applications

HDX 9004

HD

- Highest quality video with HD (1280 x720) video resolution at 1 Mbps and above at 30 frames per second
- Call speeds up to 4 Mbps point to point
- 5 professional video inputs and 4 display outputs
